Create a single page website with the following specifications:

1. Header must have a logo of the website and Main Menu
2. The main menu should have following menu items:
   1. Home
   2. About Us
   3. How it works
   4. Contact Us
3. Below header, add slider which will have 4 to 5 different slides along with image and text on it.
4. The section below the fold should contain information which can be reached when the user clicks on any of the menu items in the main menu.
5. The footer should contain Name, address and contact number of the website owner and social connect icons like FB, Twitter, Linkedin, etc.

The site should be responsive, including menu, logo, and images.

NOTE: Solve above problem and send the working solution in next 3 working days. You can use HTML 5, CSS, Jquery and any front end javascript libraries like React, Angular, etc. you are comfortable with. UI need not be fancy but should be usable.

You should post your working solution on GitHub public repository and send a link to the repository. Provide instructions in the readme file in the repository so that we can follow them to install and test solution.
